

their safety is essential.
Protecting people, property, and the planet.

Outside Support Spill and Secondary Containment

Key Features:

- Rugged, one-piece design — no loose or separate parts.
- Operates in extreme conditions (-30°F to 160°F).
- UV-inhibited materials resist cracking and weather damage.
- Double-ribbed aluminum wall supports prevent corrosion and add strength.
- Counterbalanced locking plates keep walls upright and secure.
- 100% unobstructed floor space for vehicles, equipment, and cleanup access.
- Simple deployment — unfold, pull wall upright, and lock into place.
- Wall heights available in 8", 12", 18" and 24" and stay locked even in snow or icy conditions (no self-rising parts to jam).
- Diagonal outside-support legs free up interior workspace.
- Reinforced corners with wrap-around welds — no "kiss welds" that can peel under pressure.
- Supports spaced every 2 ft for full-rim stability and wall integrity.
- No air or liquid inflation required.
- Rectangular footprint matches vehicle and equipment profiles.
- 1" reinforced hem prevents wall sagging.
- Integrated staking points hold the berm steady in high winds.
- **Made in the USA.**
