PolySeam® Liner Attachment System

Concrete application.

Pipe support application.

Steel sheeting application.

Product Description:

The introduction of BCI's patented PolySeam® system creates a fast and cost-effective alternative to traditional batten bar attachments. Utilizing XR-5 or HDPE, the PolySeam® system replaces maintenance and repairs needed to maintain integrity of the batten bar method of attachment — for a virtually maintenance-free system. Installs faster and is more durable, saving thousands of dollars in installation costs, and it installs in the most extreme conditions.

Before

After

Benefits:

- Installs faster and is more durable, saving thousands of dollars in installation costs
- Installs in the most extreme conditions
- Delivered to your site and then cut to desired length for seaming application.
- Sections are then seamed into place using traditional welding methods.
- Attachments are then made from HDPE or XR-5 to tank ring walls, wall, pipe supports or any other penetration.
- Once XR-5/HDPE transition strip is in place, existing liner system is attached using our spray applied coating system to the containment penetrations.
- **Note:** All bonding surfaces will need to be cleaned, potentially blasted and primed prior to application.
