

# Hydrocarbon Detection Strips

## Product Images

The light blue hydrocarbon detection strip will turn a darker blue when hydrocarbons are present in water or soil. The darker the test strip, higher hydrocarbon content.

-  No oil present
-  Some oil present
-  Mostly oil present

Colors are approximations

## Short Description

---

- Quickly identifies hydrocarbons in water or soil, including gasoline, fuel oil, and lubricating oil
- Light blue strip turns dark blue when hydrocarbons are present, offering clear visual results
- Useful for spill response, groundwater monitoring, leak detection, and regulatory inspections
- Helps facilities meet EPA requirements for oil and hydrocarbon discharge testing
- Simple, fast testing method with no other equipment required
- Each container includes 100 single-use detection strips
