

Ethylene Polymer PVC with Elvaloy® Technology Geomembrane

Product Images

Short Description

- Low thermal expansion-contraction properties
- High-strength, chemical-resistant grade for maximum protection from high temperatures and a broad range of acids, oils, methane, and more
- Application - Fuel storage tanks, pond and tank liners.
- Approv/Lstg Regulation - Florida Department of Environmental Protection Agency approved for secondary containment

Description

Use geomembranes for secondary containment for fuel storage tanks, pond and tank liners.

Use our geomembranes as secondary containment for fuel storage tanks, pond and tank liners. With greater durability and longer life protection than batten bar, the ethylene polymer PVC with Elvaloy technology performs in even the harshest conditions and is available in custom configurations.
